Product Pitch Contents

ESSENTIAL POINTS TO COVER

The Problem
What is SERVI LENS?
How it functions?
Business Model
Phase 2?

The Problem

“An unattended object could be a bomb!”

Data Source : DMRC

What is Servi Lens?

- " Object " detection System
- " Idle " time tracking
- " Intimation " generation (not decision)

Steps :

- Detects object
- Tracks " idle time "
- If idle time >20 mins
- Generate intimation to nearest human authority
- Decision
- Action!

Enabled via proprietary dashboard.

Let's talk money!

- We plan on Licensing this platform to COVERT TECHNOLOGIES (A surveillance equipment manufacturer) Delhi.
- A reseller model for security agencies which provides security guards in multiple organisations.

More avenues are on their way!

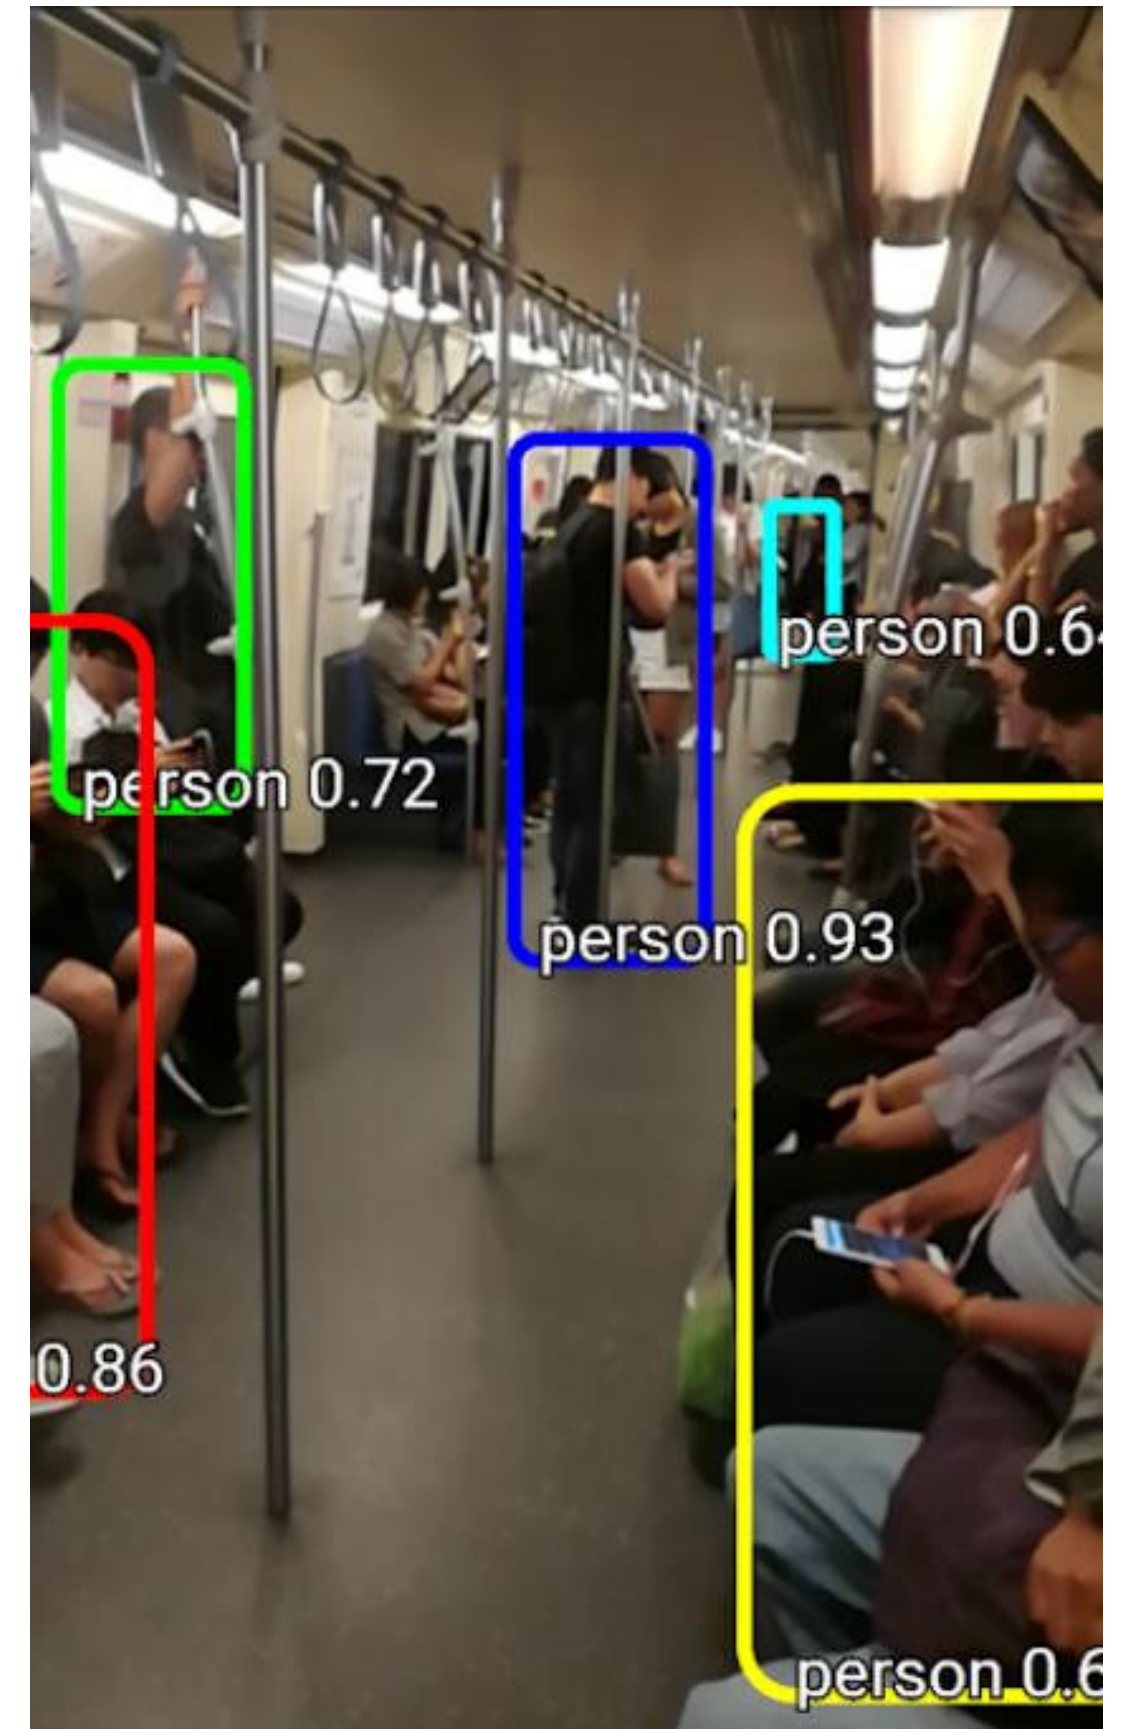

PHASE 2?

An ambitious project.

- Add **object** tracking in moving metros.
- Detect **unattended** objects en route.
- Generate **intimation** to authority via proprietary dashboard.
- Decision
- Action!

This still requires a lot more testing and training to be implemented, Our mentors pushed us to think about all the nuances of this phase and we are GRATEFUL! Now we won't look like fools when we pitch it.

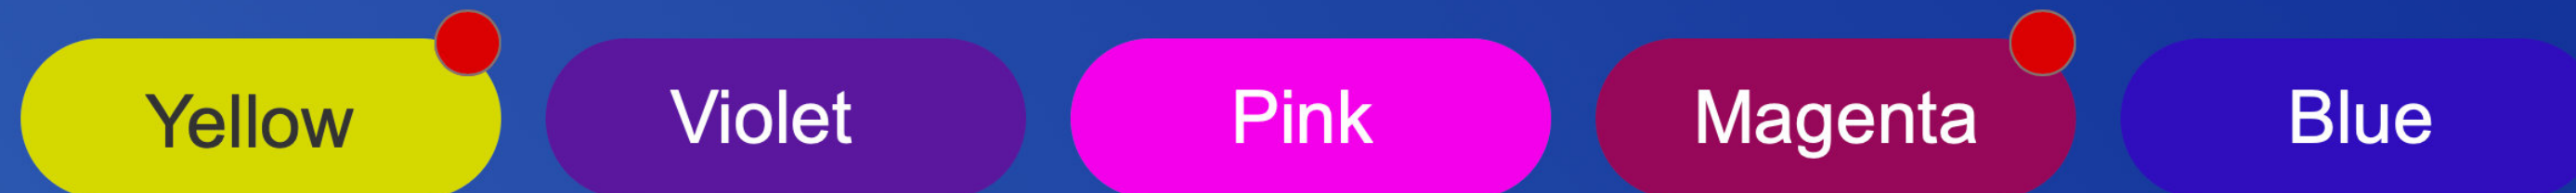

HOW DOES IT LOOK?
